

TECHNION GLOBAL IMPACT

The Technion-Israel Institute of Technology — consistently ranked among the world's leading science and technology universities — is the engine driving Israel's high-tech economy. It educates global entrepreneurs, develops pioneering technologies, expands our scientific frontiers, and betterers life around the world.

- Given Imaging, InSightec, Mazor Robotics ... dynamic Israeli high-tech companies with a global reach.
- Google, IBM, Intel, Motorola, Qualcomm, Microsoft, Yahoo!, Hewlett-Packard ... high-tech powerhouses have strategically set up operations on or near the Technion campus.
- The Technion is one of the “Top 10 Colleges for Tech CEOs,” according to an August 2013 report by Bloomberg Rankings. The Technion (tied for #7) is the only university outside of the U.S. on the list, which was compiled by looking at the CEOs of 250 U.S. companies with a market value of \$1 billion and above, and determining the university at which those CEOs studied.
- One of the Western world's largest computer science and electrical engineering departments. The Technion is ranked 18th among 500 universities in computer sciences for 2013.
- Hundreds of visiting faculty members at leading universities and research centers.
- Far reaching international collaborations with universities, governments and companies, including:
 - A partnership with Cornell University to create a new applied science educational institution in New York City. At the very heart of this initiative is the Joan and Irwin Jacobs Technion-Cornell Institute (JTICI), which offers a dual master's degree from both universities, and which is expected to help create tens of thousands of jobs and businesses.
 - A joint venture with Shantou University to build a new academic facility in China called the Guangdong Technion Israel Institute of Technology (GTIIT). This partnership is clear evidence of the Technion's burgeoning global influence, and is viewed by many as part of the broader movement of globalization now sweeping the academic world.

- Faculty and students drawn from every corner of the globe, generating a vigorous mix of people, ideas and programs.
- Nearly 96,000 graduates who launch, lead and grow Israel's major companies, including 59 of the 121 high-tech Israeli companies on Nasdaq. These companies originating from the Technion have a market value (as of November 2010) in excess of \$28.2 billion. (Figures as of 2012. Source: *Technion Nation*)
